

# EAGLE TIRE BALER

The Eagle Tire Baler was designed to: eliminate collection of waste water (conductive to mosquito breeding), reduce volume, reduce fire hazard, and to provide beneficial usage of waste tires in baled form. The tire bale also creates a retrievable product, if mono-filled, for

future uses. We have trade marked the name "Enviro-Block" for our

unique tire bale. Review our special baler web-site to learn about the "Enviro-Block" System. The bale contains 100 waste tires compressed to the size of 2 1/2 x 4 1/2 x 5 foot. The baler is capable of baling four bales per hour or thirty two bales in an 8 hr. shift. This would equate to 3200 waste tires in a day. The bales can consist of 70% car and 30% truck tires. Portable units are gas, diesel and electric.

## Specifications

Bales waste tires to form "Enviro-Block".

	<u>Portable</u>	<u>Stationary</u>
Weight	12,980 lbs.	10,000 lbs.
Height	165"	165"
